

# Planmeca Chair™

*The best in dental chair design*

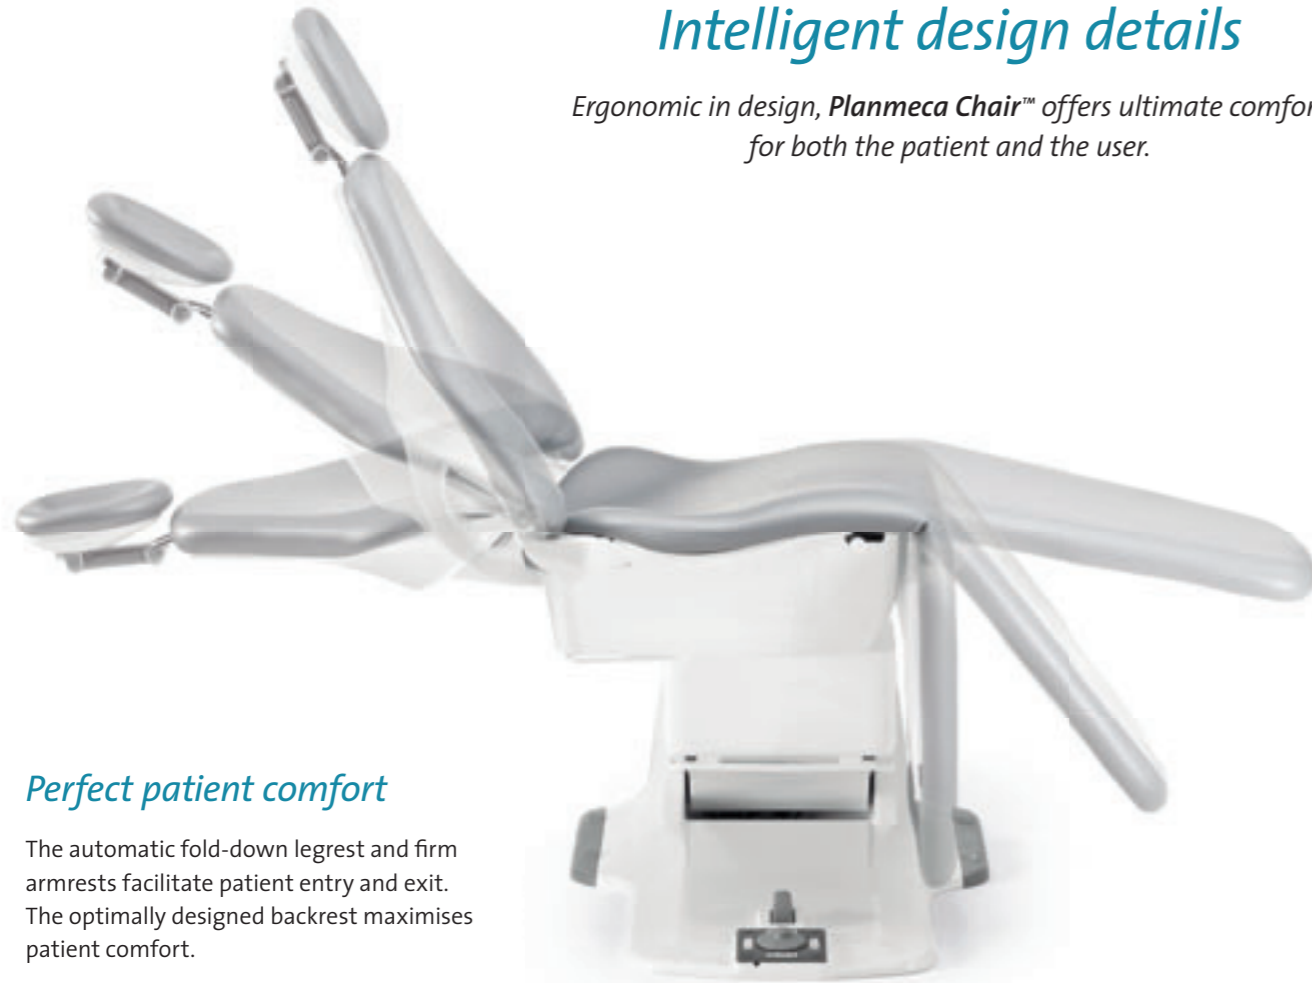

*The optimally designed and versatile features of Planmeca Chair™ provide excellent working ergonomics for the dental team and optimal comfort for patients of all sizes.*

**PLANMECA**

## Intelligent design details

Ergonomic in design, *Planmeca Chair™* offers ultimate comfort for both the patient and the user.

### Perfect patient comfort

The automatic fold-down legrest and firm armrests facilitate patient entry and exit. The optimally designed backrest maximises patient comfort.

### Easily adjustable headrest

The double articulated headrest allows comfortable positioning of the patient's head providing also good visibility to the treatment area. Thanks to the smooth and lightweight headrest length adjustment, the chair can be easily adapted for different-sized patients.

### Excellent working ergonomics

The slim and narrow backrest and extensive legroom ensure optimal working ergonomics for the whole dental team. The automatic legrest facilitates closer face-to-face positioning that is greatly appreciated in patient consultation and in prosthodontic treatment.

## Options for a variety of needs

The highly functional *Planmeca Chair* adapts perfectly to a variety of specialised needs.

### Flexible positioning

The 180-degree swivel allows the chair to be swivelled 90 degrees left and right. The swivel feature provides unique freedom in operatory design and is a valuable feature when for instance an intraoral X-ray unit or more space for the assistant side is needed. The mobile base with wheels provides extra possibilities for positioning your *Planmeca Chair*.

### Great adaptability

The wide movement range enables treating patients freely in various positions. The chair can be adjusted to a very low position, a useful feature when the patient is in a sitting or half-sitting position. The chair can also be adjusted to a high position level if the dentist prefers to perform a treatment in a standing position.

### Fit for surgical needs

A surgical intravenous armrest is available for immobilising the patient's arm for example during sedation.

The surgical headrest option provides enhanced sideways support for the patient's head. The large OP tray serves as an extra surface for carrying instruments and other accessories. The tray can carry heavy loads and is especially useful for orthodontics and surgery.

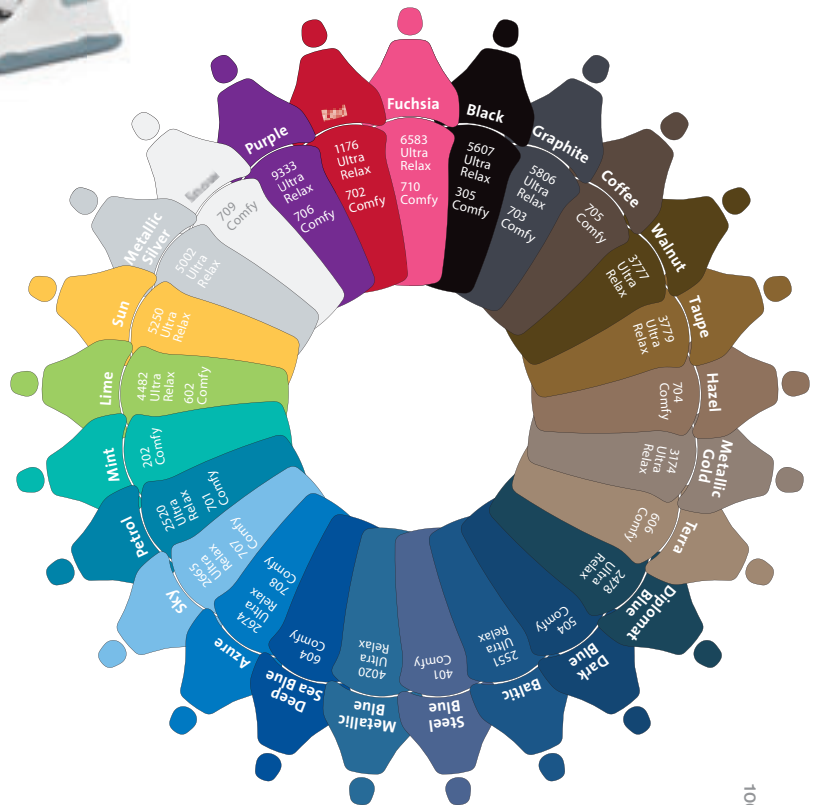

## Optimum illumination

The **Planmeca SingLED®** operating light provides optimised illumination, a versatile movement range and a uniform colour for the entire treatment area. The operating light can be controlled simply by waving a hand in front of the light head.

## High-quality upholsteries for enduring comfort

**Planmeca Chair™** is available with both **Comfy™** and **Ultra Relax™** upholsteries in multiple stylish colours.
